DETAILED ACTION

Claims 1-25 are pending.

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-6, 17-18, 19-25 drawn to a recombinant protein and a method of use, classified in class 424, subclass 203.1.

II. Claim 7, drawn to a mutant gene, classified in class 536, subclass 23.4.

III. Claim 8, drawn to primers, classified in class 536, subclass 24.33.

IV. Claims 9-16, drawn to methods of developing a recombinant anthrax toxin inhibitor, classified in class 435, subclass 32.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, that the product as claimed can be made by another and materially different apparatus, wherein the claimed protein can be made by biochemical synthesis, rather than recombinant production based upon the encoding gene.

3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions Group II and III, have separate utility such

as the gene can be used in a method of making a recombinant hybrid protein and the primers can be used to detect the presence or absence of a pathogen. See MPEP § 806.05(d).

1. Inventions Group III and Group IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product, wherein the primers can be used to detect a pathogen that comprises the nucleotide sequence, to used in a method of making inhibitors, and can be used in a method of making a recombinant polypeptide.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
